

Lab 2: Agile Backlog Creation and Sprint Simulation in Jira

Digital Campus Library Reservation Gateway (Jira space: Library-Gateway, key LIB)
Dhareen G | SRN: PES1UG24AM084 | PES University, CSE (AI & ML)

1. Epics

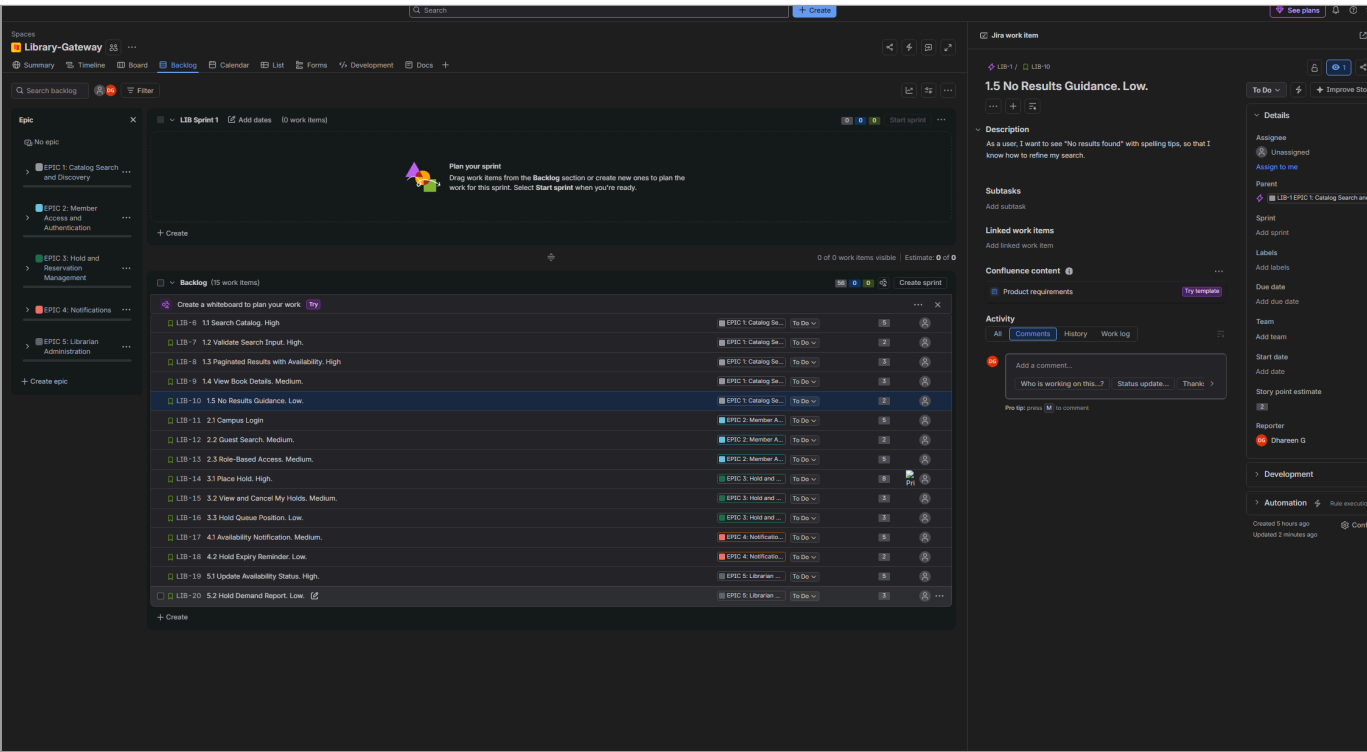

Epic	Description	Story points
EPIC 1: Catalog Search and Discovery	Let members and librarians search the catalog and see availability.	15
EPIC 2: Member Access and Authentication	Campus login, guest browsing, and role-based access.	12
EPIC 3: Hold and Reservation Management	Place, view and cancel holds on checked-out titles.	14
EPIC 4: Notifications	Notify members when a held title is ready or a hold is expiring.	7
EPIC 5: Librarian Administration	Tools for the Head Librarian to keep data correct and monitor demand.	8

Total: 56 story points across 15 user stories.

Jira Backlog with the five Epics in the epic panel.

2. Backlog: user stories under their epics

Jira Backlog with 15 user stories (LIB-6 to LIB-20) and story points assigned; backlog total 56 points.

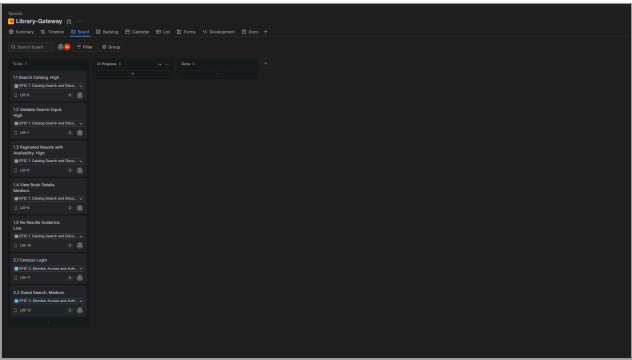

3. User stories, priority and story points

Key	Story	User story	Priority	Pts	Sprint
LIB-6	1.1 Search Catalog	As a student member, I want to search by ISBN, title or author, so that I can find a book quickly.	High	5	Sprint 1
LIB-7	1.2 Validate Search Input	As a user, I want to be told when my search term is empty or badly formatted, so that I can fix it before searching.	High	2	Sprint 1
LIB-8	1.3 Paginated Results with Availability	As a user, I want to see paged results with title, author, ISBN and Available/CheckedOut, so that I can spot what I can borrow.	High	3	Sprint 1
LIB-9	1.4 View Book Details	As a user, I want to open a detail page for a result, so that I see full info and a Place Hold option if it is checked out.	Medium	3	Sprint 1
LIB-10	1.5 No Results Guidance	As a user, I want to see "No results found" with spelling tips, so that I know how to refine my search.	Low	2	Sprint 2
LIB-11	2.1 Campus Login	As a student member, I want to log in with campus credentials, so that I can place holds under my identity.	High	5	Sprint 1
LIB-12	2.2 Guest Search	As a visitor, I want to search without logging in, so that I can check availability before signing in.	Medium	2	Sprint 1
LIB-13	2.3 Role-Based Access	As a Head Librarian, I want to have librarian features separated from member features, so that members cannot change library data.	Medium	5	Backlog
LIB-14	3.1 Place Hold	As a logged-in student member, I want to place a hold on a checked-out title, so that I get the book when it is returned.	High	8	Sprint 2
LIB-15	3.2 View and Cancel My Holds	As a student member, I want to see and cancel my active holds, so that I can manage what I no longer need.	Medium	3	Sprint 2
LIB-16	3.3 Hold Queue Position	As a student member, I want to see my position in a title's hold queue, so that I know how long I will wait.	Low	3	Backlog
LIB-17	4.1 Availability Notification	As a student member, I want to be notified when a held title becomes available, so that I can collect it in time.	Medium	5	Sprint 2
LIB-18	4.2 Hold Expiry Reminder	As a student member, I want to get a reminder before my hold expires, so that I do not lose my place.	Low	2	Backlog
LIB-19	5.1 Update Availability Status	As a Head Librarian, I want to update a title's status on return or checkout, so that search always shows correct availability.	High	5	Backlog
LIB-20	5.2 Hold Demand Report	As a Head Librarian, I want to see titles with long hold queues, so that I can decide which books to buy more of.	Low	3	Backlog

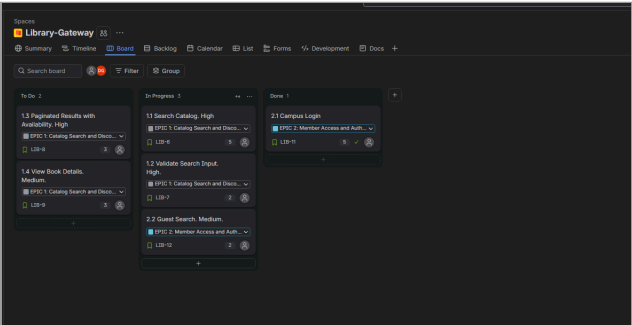

4. Sprint plan

Sprint	Stories	Points	Goal
Sprint 1 (1 week) <i>named "LIB Sprint 2" in Jira</i>	1.1, 1.2, 1.3, 1.4, 2.1, 2.2	20	Members can search the catalog, see availability, and log in.
Sprint 2 (1 week) <i>named "LIB Sprint 3" in Jira</i>	1.5, 3.1, 3.2, 4.1	18	Logged-in members can place and manage holds and get notified.
Backlog	2.3, 3.3, 4.2, 5.1, 5.2	18	Left for later sprints.

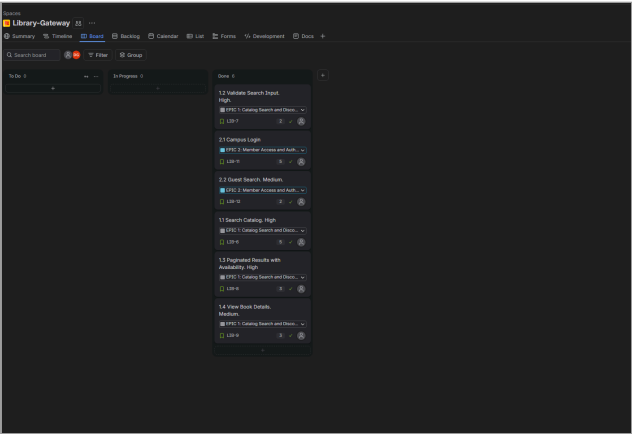

5. Sprint board (Active sprint view), Sprint 1

Sprint started: 6 stories (20 points) in To Do.

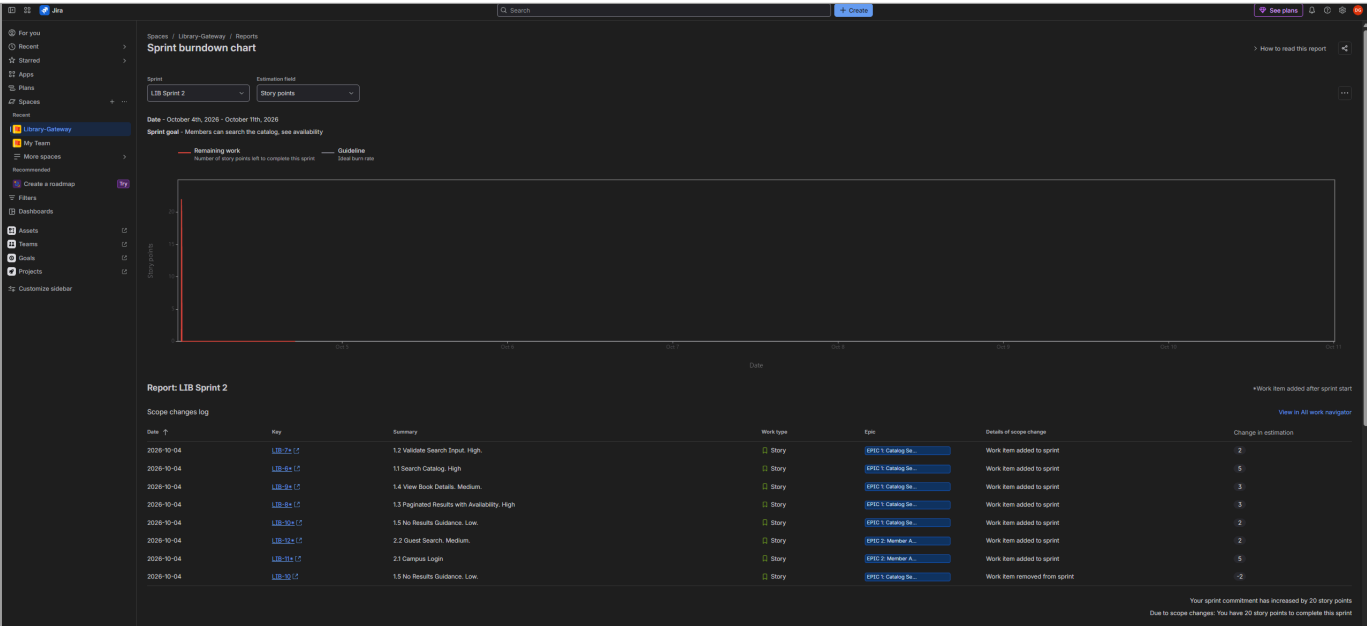

Mid-sprint: stories moving To Do, In Progress, Done.

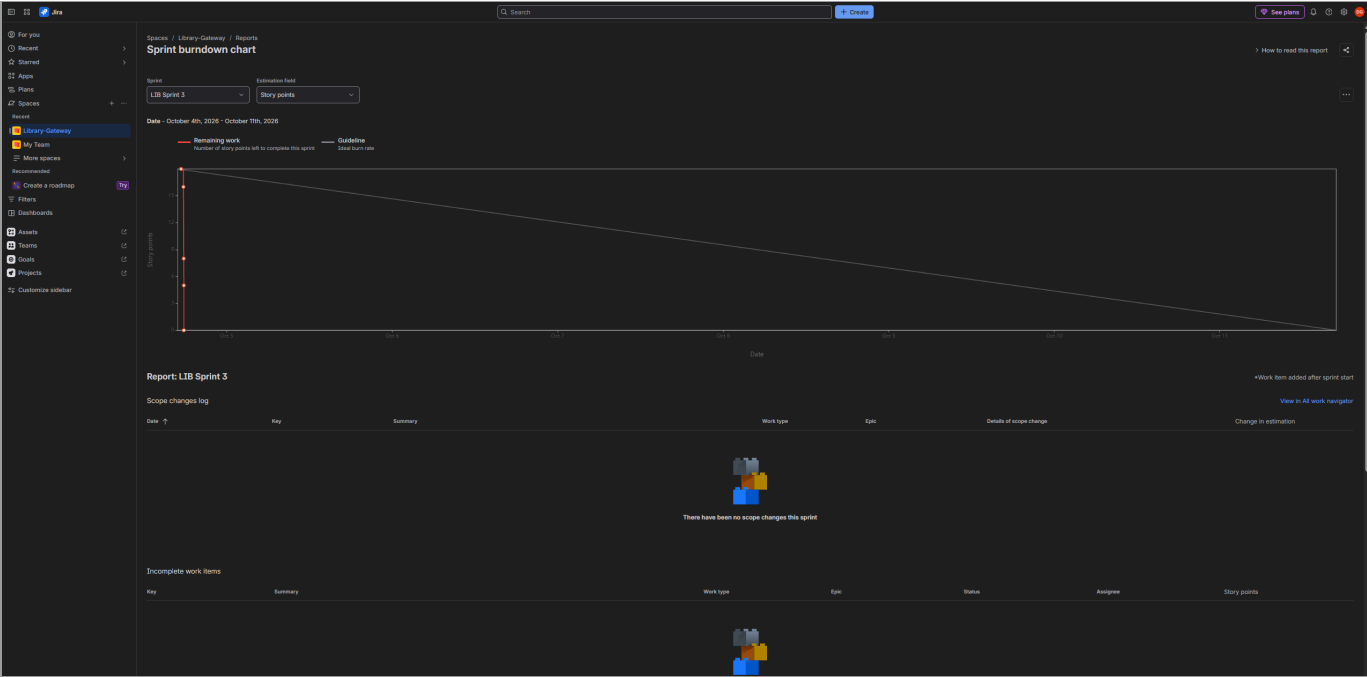

All 6 stories Done.

6. Burndown charts

Sprint 1 (named "LIB Sprint 2" in Jira): 20 story points, including the scope-change log.

Sprint 2 (named "LIB Sprint 3" in Jira): 18 story points, no scope changes.

7. Reflection

1. Did your estimations reflect the actual effort?

We could only check this in relative terms, because the sprints were simulated and finished in minutes rather than days. Within that limit the sizing held up: Place Hold (8 points) was the largest item and showed as the biggest single drop on the Sprint 2 burndown, while the 2-point stories were the smallest steps. The 5-point search, login and notification stories rely on external pieces (catalog query, campus login, email), so they are the estimates most likely to change with real work.

2. Was your backlog well-prioritized?

Yes. Search and login are High because every other feature depends on them, and Place Hold needs both in place, so it follows in Sprint 2. Low-priority items such as hold queue position, expiry reminders and the demand report stayed in the backlog because they add convenience rather than core value. One improvement: availability updates by the librarian (5.1) arguably should come earlier, since search results are only useful if the status is accurate.

3. How did your simulated sprint align with your plan?

Sprint 1 was planned at 20 points, but 1.5 No Results Guidance (2 points) was pulled in by mistake, so Jira first showed 22 points. It was removed, which the burndown scope-change log records as -2, and the sprint finished at 20 of 20. Because stories were dragged into the sprint after it had started, Jira also logged each as added after sprint start. For Sprint 2 all four stories (18 points) were in the sprint before starting, and the scope-change log is empty. Both sprints completed fully, so the scope was met, but the real time taken was minutes, not the planned week.

4. What insights did the burndown chart give about your team's capacity?

Both sprints reached zero remaining points, but the red line drops almost vertically at the start while the guideline runs across the full week, because the work was simulated in minutes. The Sprint 2 chart steps down 18, 16, 8, 5, 0 as the 2, 8, 3 and 5 point stories finished, showing how story size drives the shape. The Sprint 1 chart shows what scope change looks like: a spike to 22 from stories added after the start. Since the pace was not real, these charts do not measure true capacity; they show a commitment of 20 and 18 points that a team could try as a starting velocity. The practical lesson is to finalize sprint contents before pressing Start and to move work to Done as it actually completes.
