

# Use-Case Flow Specification

## *Digital Campus Library Reservation Gateway — Lab 1*

### Use Case: UC-01 — Search ISBN Catalog

**Primary Actor: Student Member (also usable by Head Librarian)**

#### Preconditions

- User is on the library gateway home screen.
- Login is optional for search only, but required to place a hold from the results.

#### Postconditions

Success: Matching results are displayed with each title's availability status.

Failure: No results are shown; the user is shown guidance to refine the search.

#### Main Success Scenario

1. User selects “Search Catalog” and enters a search term (ISBN, title, or author).
2. System validates the input is non-empty and properly formatted.
3. System queries the catalog database for matching titles.
4. System returns paginated results showing title, author, ISBN, and availability status (“Available” / “CheckedOut”).
5. User selects a result to view full details.
6. System displays the book's detail page, including a “Place Hold” option if the book is checked out.
7. Use case ends successfully.

#### Alternate Flow

##### **3a. No Matching Results**

- 3a1.** System finds zero matches for the query.
- 3a2.** System displays “No results found” and suggests checking spelling or broadening the search.
- 3a3.** Use case ends without displaying a result list.
